The **ScrubAir Pipette Washer/Dryer** automates the traditionally time-consuming process of washing and drying glass pipettes using water, detergent and compressed air to wash, rinse and dry volumetric pipettes.

**Thoroughly cleans pipettes inside and out.** Percolating action of compressed air and water scrubs the interior walls while water and detergent cascade down the outside walls.

**Saves water and money.** Compared to traditional siphoning methods that can use over 600 liters per load, the eco-friendly ScrubAir uses as little as **12.5 liters** of tap/pure water, which adds up to **water savings costs of \$2900** or more.

**Dries quickly** with compressed air in about four hours. Models with built-in heater dry twice as fast—two hours.

**Accommodates from 12 to 60 pipettes** depending on bulb and stem diameters.

**Programmable.** Factory cycle settings may be user modified. Start time may be delayed up to 8 hours.

**Portable.** The ScrubAir can be hooked to a sink faucet allowing it to be easily transported from lab to lab. Or, install it using a dedicated water supply and drain.
